

## 6. Reference tables

### Ref table

Just select the correct signature object and it will be treated as a ref table. A standard REF table does truncate insert

You can choose to load new records in there using the load date for historical comparison.

Easy to join to the snapshot PITs

You can select the “reference” signature object type for these source tables in the editor. The object will be treated as a ref table. A standard REF table does truncate insert. You can choose to keep the history and use the load date for historical comparison.
