

Prerequisites for the installation (22)

Agile Data Engine is a SaaS cloud offering and there is no installation required (no additional components, virtual machines or client agents).

ADE services are accessed via a web browser.

A new Agile Data Engine tenant set-up includes a few basic installation steps:

- Configuration of the target databases
- Configuration of runtimes (environments)
- Basic connectivity and services setup (such as IP whitelisting, enabling API's)
- User management
- Setting up development standards (naming conventions, load patterns & templates etc.)
