

Run on Premises

Start Datavault Builder on your own Linux Servers or Kubernetes cluster or Windows Desktop.

Run in the Cloud

Run Datavault Builder on AWS, Azure or GCP or any other cloud provider. On Linux using a Docker, Kubernetes or other compatible container services.

Subscribe to SaaS

You want to take care of infrastructure order Datavault Builder as SaaS version and the Datavault Builder will be deployed and managed in a specific resource group within your Azure Tenant.

And most important: revisit your decision any time. By design, you can switch any time, without changes in your licensing costs:

- on-prem to cloud
- from any cloud provider to your new provider of choice
- from cloud to on-prem
